APart product drawings now available in Stardraw Audio library

As from now, the 2-D drawings of all APart electronics and speakers are available in the library of Stardraw Audio.

Stardraw Audio is a leading design and documentation software for audio professionals. The program incorporates a library that contains 2-D CAD drawings and symbols of professional audio products from all major manufacturers. As from now, all APart products are included in this library.

Kris Vermuyten, Commercial Director of APart commented : "We are very pleased to announce the addition of the APart products into the library. Many audio professionals across the world use Stardraw Audio for their system design. They now have the CAD-drawings of all our speakers and electronics within the click of a mouse, which will ease their workload considerably."

Thanks to an 'intelligent environment'-feature, an installer can design a system in block or pictorial schematic mode, and a detailed rack layout is created automatically. An integration with Excel means bills of materials, quotations and cable schedules can be generated from any design. New product information from manufacturers is turned into symbols and distributed into monthly updates.
